MEMORANDUM FOR: All Suppliers

SUBJECT: Release of Project Developed Systems, Sub-systems, Components, Techniques and Technical Know-How to Department of Defense

1. Purpose: It is the purpose of this memorandum to set forth the basic policy of this Headquarters regarding the release of Project developed information to other than Project cleared persons and to outline a procedure for implementing this policy.

2. Security Standards: It is re-emphasized that from its inception access to knowledge of this Project has been consistently limited to individuals who are not only acceptable from a security point of view but have a valid "need-to-know". With few exceptions, such considerations as a high official position, the possession of security clearances for sensitive data, or an official concern with research and development or with operations of the type involved in this project have not been accepted as sufficient reasons for admitting an individual to knowledgeability. As suppliers are aware, an effort has been made to apply this policy to all persons regardless of their place in Government or private industry although some erosion of security standards has inevitably occurred; partly as a result of the sheer number of individuals with a valid "need-to-know" but partly by reason of the pressure to cut in individuals on the basis of position or "responsibility" for a certain field of activity. One purpose of this memorandum is to prevent further erosion of security standards without inhibiting a desirable spread of knowledge of subsystems developed for the Project.

3. General policy: Within the limits set by the requirement for continued security, the basic policy will be to permit the release with only a low security classification of information on subsystems to unwitting personnel who are cleared for the low classification involved, with the exceptions stated in paragraph 4 below. On the other hand, knowledge of the existence of an integrated weapons system based upon the U-2 aircraft and including all the subsystems remains highly classified and every effort must be made to withhold such knowledge from unwitting personnel. It is possible at this time to reduce the classification on subsystems only because no one subsystem is regarded as highly sensitive in itself and only if information concerning the subsystems is handled in such a way as not to permit unwitting personnel to infer the existence of the total weapons system.

4. Specific Rules: The following specific provisions which give effect to the general policy stated above should guide all

suppliers in handling information concerning the Project's subsystems:

a. The existence of the U-2 aircraft itself has been acknowledged in carefully worded press releases which have been attributed to it (by inference) a range of perhaps 1800 nautical miles and a ceiling of about 55,000 feet. Photographs designed to reveal as little as possible concerning the aircraft's performance have received some circulation among military components overseas and may soon be released for publication. Nevertheless, the aircraft carries an official classification of SECRET (so physical access to it can be denied and security precautions explained), and its true performance is classified TOP SECRET and may be made knowledgeable only to witting personnel. Likewise, the fact that it is a reconnaissance aircraft and any association of the various subsystems with the U-2 should be revealed only to witting personnel.

b. Each supplier of a subsystem is at liberty to disclose the existence of the subsystem as an already designed and developed piece of equipment and to provide information concerning its performance to potentially interested agencies of the United States Government and to business firms to which such disclosure is necessary in order to encourage the widest use of the subsystem for the purposes of the United States Government. Where it is desired to make disclosure to exploit a purely commercial opportunity prior clearance must be obtained. Information about each subsystem will normally carry the classification of "CONFIDENTIAL" in order to protect it from publication.

c. In disclosing information concerning a subsystem, the supplier must be prepared with a plausible and tenable explanation of its development. In many cases it may be sufficient to state it was developed for a TOP SECRET project concerning which no information whatever can be released. In other cases it may be plausible to explain the idea as having been developed by the supplier with its own resources. In no case can unwitting persons be permitted access to test data or records of experience of the subsystems which reveal anything concerning the Project or other elements of the total weapons system of which the subsystem is a component.

d. An overall procedure is presently being worked out with the Air Force for purchase by that Department through normal channels of any project developed items desired by the Air Force. Suppliers will be fully briefed with respect to such procedures when they have been established.

5. To insure compliance with the requirements of this policy and to assist suppliers in the protection of Project information,

suppliers will be responsible for keeping Project Headquarters advised of proposed discussions, negotiations, briefings, etc., with any non-Project cleared personnel or departments. Approval of such meetings will be a normal routine matter, provided the arrangements are in accord with the above established general instructions. Any departure from the established standard will necessarily require a prior review by the Security Staff and notification should, therefore, be made sufficiently in advance of any proposed meetings.

6. The substance of this memorandum will be made available to those Government agencies currently associated with our program which logically may have occasion to avail themselves of Project development. It is expected they will respect the requirements levied against Project suppliers. The responsibility for compliance with this policy, however, will continue to rest with each individual supplier and any questions should be immediately forwarded to Project Headquarters to insure satisfactory review and disposition.

7. More detailed instructions to suppliers will be forthcoming in the future as procedures are developed. In the meantime suppliers will proceed in accordance with specific instructions given to individual suppliers with respect to specific problems of this nature which require immediate action.
